

# EU Framework Program for Research and Innovation (WATER-4a-2014 - H2020)

Project Nr: 641821

**Applying European market leadership to river basin networks and spreading of innovation on water ICT models, tools and data.**

## **Deliverable D2.2** ***Water companies and solutions report***

Version 3.0

Due date of deliverable: 30/06/2015  
Actual submission date: 07/07/2015

<b>Document control page</b>		
<b>Title</b>	D2.2 Water companies and solutions report	
<b>Creator</b>	KH_TUD	
<b>Editors</b>	KH_TUD, RN_TUD, EM_TUD, AC_OR, CS_52N, DD_CREAF, LP_CREAF	
<b>Description</b>	The water companies and solutions report presents the inventory of water companies that is intended to support the WaterInnEU market place as a forum where companies and organizations, as well as their solutions, can be found by water managers. The companies involved in the European projects contained in the inventory that constituted Deliverable 2.1 served as a basis for the inventory of companies. Both inventories are combined in one spreadsheet, which is an annex to this report.

## 1. Introduction

This report describes the procedure used to create deliverable D2.2 and presents a summary of its contents, the listing of European companies to support the implementation of the WaterInnEU Marketplace. Since the Marketplace aims to specifically provide *solutions* that help implementing various European directives, not only commercial companies are listed, but also research institutes, trade associations, and public institutions. Therefore, this report uses the term *companies* to refer to the whole of these public and private entities.

The list of companies is meant as a starting point for the WaterInnEU Marketplace and will serve as input for selecting companies that will be integrated in the prototype of the Marketplace. By including a large number of companies, we hope to lay the foundation for a viable Marketplace from the beginning, which will raise public awareness and will allow the company database to grow further in the future. Those companies that offer interesting solutions but are not yet listed in our current inventory, may be considered at a later point in time.

The listed companies are either identified from the earlier identified European projects (see Deliverable 2.1), or by the different WaterInnEU partners in their home markets. Section 2 describes the procedures followed for including and categorizing the companies in our inventory.

Section 3 lists the identified companies. For a complete overview, Annex 1 presents all identified company data, and how the companies are linked to the identified European projects.

## 2. Inventory procedure and categorization

This section describes the selected procedure to find companies of interest for the WaterInnEU Marketplace. It further presents the chosen categories to properly characterize the companies in the database.

### 2.1. Procedure

#### 2.1.1. Identification

Two separate procedures were used to identify the companies listed in Section 3 of this report:

1. The database of identified European projects has been searched to identify their supporting consortia;
2. Each partner of the WaterInnEU consortium has identified companies within their home market.

The first procedure already resulted in a long list of companies. However, the majority of these companies appeared to be research institutes involved in the projects. The list of companies therefore seemed incomplete, as SMEs and larger-scale enterprises that offer very interesting solutions were still missing.

For this reason, the second procedure was initiated. The partners within the WaterInnEU consortium already knew numerous companies of interest within their own geographical region. This way, the final list of companies is now a good mix of commercial companies, research institutes, associations, and governmental bodies, that all share the fact that they have in-house knowledge and solutions that are ready for the market.

#### 2.1.2. Inclusion criteria

Numerous companies were identified following the described procedure, but not all of them were of interest for our database. We therefore set up some criteria to determine whether companies should be included in or excluded from the database.

The most important criterion is that the company delivers offerings of interest for our end users. For example, wastewater and drinking water companies offer services to civilians and industry, but are mainly users of the products and services in the WaterInnEU database (e.g., offerings with respect to efficiency and ICT tools). These companies are therefore generally left out of the database, unless they have a large research and development group, offering solutions for better water treatment.

There are several other criteria to *not* include companies in the database:

- companies that were found to be discontinued;
- companies with no on-line presence.

Finally, universities are generally left out of the database, because:

1. their core business is not to deliver marketable solutions;
2. the large amount of universities would clutter the database, making it more difficult to find interesting companies.

### 2.2. Categorization

The company-related information in the database is kept limited. Reason for this is that most relevant information can be generally found on the company website. In order to link the end-users

of the database to the companies of their interest, the database does list some basic information of each company using keywords, besides the information about the company type and the country where it is based.

The following list presents and defines the categorization for the companies:

- *Code*: identifier for the company in the WaterInnEU database (this code is used for the link between the company and the projects they are involved in).
- *Class*: one or more of the following identified classes for a rough categorization of the type of company:
  - 1) SME (Small and Medium-sized Enterprises): businesses with up to 250 employees<sup>1</sup>;
  - 2) Large enterprise (often, but not necessarily, a multinational);
  - 3) Consulting firm;
  - 4) Trade association: organization founded and funded by companies in the water sector, facilitating cooperation and outreach (often but not solely non-profit organizations). Potential to act as 'multipliers' giving access to their membership of SMEs;
  - 5) Research institute: institute conducting research and maintaining specialist knowledge (often but not solely public and non-profit organizations);
  - 6) Remaining: companies and organizations that do not fall inside any of the above classes (e.g., state-owned companies, NGOs, etc.).

Please note that these classes do not necessarily exclude each other. Some companies are in multiple classes.

- *Name*: name of the company.
- *Country*: country of the company or, in case of a multinational, its headquarters.
- *Website*: website of the company (assumed sufficient for the provision of contact details).
- *Keywords*: keywords describing the expertise of, or the specific solutions delivered by the company.

## 4. Recommendations for implementation into the Marketplace

This section provides some brief recommendations for the implementation of this company database into the WaterInnEU Marketplace.

First, the Marketplace should provide an option to add additional companies. A proper classification of the company should then always be provided, as well as relevant keywords and the project website. On the other hand, companies that are not of interest or are discontinued should be filtered out of the database. In order to do so, we suggest a quality control system as also proposed for the project database (Deliverable 2.1). This way, the feedback received can aid in keeping the database clear and comprehensive.

Second, we think it is good to maintain the links between the companies and the European projects in which they were involved in the public version of the Marketplace. Although this demands extra maintenance work for newly added projects and companies, it provides an added service for the end-user, who can then see:

- which projects the companies were involved in and which solutions resulted from these projects;
- which companies were involved in projects that provided a solution of their interest.

## Annex 1

- Database\_v7.xlsx: spreadsheet with information about the identified companies, shown in Figure 1, and how they are linked to the identified European projects. Access: [http://www.waterinneu.org/deliverables/Database\\_v7.xlsx](http://www.waterinneu.org/deliverables/Database_v7.xlsx)

*This spreadsheet represents the current state of the project and company identification. The database of identified projects is expected to change over the course of the WaterInnEU project.*

Code	Class	Name	Country	Website	Keywords
